

Press Conference, 17 April 2012, Zagreb

Statement, Bollmann

Everyone should stay healthy and safe during his/her whole life-time.

You should start early if you would like to encourage someone to take care for his or her health and safety.

How you are perceiving risks, how you are dealing with risks is incorporated into your mind and your body in early childhood.

Risk education has to be started from the playschool.

Risk education should be part of the school curriculum.

In addition the learning environment has to be safe and healthy. Only a healthy and safe school is a good school.

Mainstreaming OSH into education should be included into the national OSH strategy.

A special focus should be given to the transition period from school to work. Young people are an especially vulnerable group: They lack experience; they have bad jobs and they are willing to take a risk.

ENETOSH collects examples of how to raise the interest of children, students and young workers for OSH and how to develop and strengthen their resources to live healthy and safe.

ENETOSH covers all levels of the education system, from playschool, school, IVET, education at the university to CVET. Currently 614 examples of good practice are accessible via our toolbox.

ENETOSH provides lecturers, teachers and trainers with methods and media to teach and to learn about OSH. Examples of whole-school approaches cover both, a healthy and safe learning environment for pupils and staff health and safety.

ENETOSH offers a platform for the systematic exchange of experience concerning mainstreaming OSH into education and training at European, national, international and the regional level.
